

# National Science and Engineering week

Building sites can be dangerous environments, as part of our community engagement practices we frequently provide safety and awareness talks to local school children and invite them to visit our sites and learn about the housebuilding process.

As part of a National Science and Engineering week children from Tyneview Primary school in Walker, Newcastle were challenged with creating eco-friendly model homes for a new town design project, a visit to our Bath Street site to study materials and building techniques assisted the project at the same time supporting the school's own 'Be Healthy' curriculum.
